SpaceX
Hawthorne, CA 90250

Dear Sir/Madam,

I am a Mechatronics graduate(2014) from the Asian Institute of Technology (Bangkok), This letter and the attached CV serve as my application for the position at SpaceX.

Maybe you hear this a lot. But I too have to confess that I'm also a fan of SpaceX and Tesla from the very early days. It is and was a great joy watching the two companies grow to become great icons in the human achievement because I was also a part of the few people who backed the great effort when people were backing Industry giants those days and undermining the determination of you guys who kicked off from the first principles to prove what it takes to achieve such astronomical heights. And your feats encouraged me and possibly many other students to do things beyond the scope of what we were asked to and I'm proud to have inherited that will and thank you very much for all those reminders of perseverance. Also I have to hand it over to you guys, Mr.Elon and also to Mr.Steve Jurvertson who is also a great guy that loves rockets.

Even though at this stage I'm supposed to say here How would I fit into SpaceX in academic terms, honestly speaking I'd really do anything to work among such an innovative cool bunch of people. I am a Mechatronics graduate and my most preferred area is control systems and multiple-robot collaboration, control system development, machine vision, Simulations and system optimization are the areas I like. But since I'm a mechatronics engineer I can handle Mechanical, Electronics systems and power systems as well. I have added short descriptions of some of my projects and video links in my CV for further information.

I would enjoy speaking with you further to discuss, in detail, how can I add more value to SpaceX. And I how am always exited to learn new things, face new challenges and work in my full capacity to achieve the best possible results. I am very much eager to apply my energy to the intersting projects SpaceX has. Please excuse me for the not so professional looking cover letter because I guess this is what happens when people apply to their dream workplace..

Best,

Ganindu Nanayakkara
